

Respected Sir/Madam,

My name is Adhishwar and I am a final year undergraduate student majoring in computer science based out of Chennai, India. I recently came across a job posting for the position of Software Engineer, Machine Learning at Cisco, CA through the Cisco Careers page. I am interested in applying to this job opening.

I am skilled in Data Acquisition, Cleaning, Preprocessing and Full stack web development. All through my college years I've been dabbling in different fields in computer science as an experiment for finding out what my calling is. After careful deliberation and aligning my skillsets with my interests I've come to the conclusion that I would like to start my career in Data Science. I've taken up various courses all through my college years that have prepared me especially for this field. I am technically strong in **SQL, Python and R**. I feel that I'd be a great culture fit at Cisco. I'm interested in taking up a job at Cisco primarily because I feel that it would be a great place for me to start my career and it aligns with my long term goals. Since I'm in my final semester of college I also have no problem being **available to work on a full time internship for the next 6 months**.

I am also open to relocating to any place other than CA, should there be any relevant opening. I have attached a copy of my resume for your perusal. Looking forward to hearing back from you. Thanks in advance.

Regards,

Adhishwar S
